GBI DATA & SORTING SYSTEMS
"The Data & Sorting Professionals"

GBI Introduces New Cross-Belt Sorter October 14, 2008

GBI, known for its line of tilt tray and carrier sorters for over 22 years is proud to introduce its new line of cross-belt sorters. GBI's cross-belt sorter is capable of sorting products weighing up to 100 pounds, broadening the range of products its systems now handle in both full belt and split belt carrier designs.

GBI's cross-belt sorter features some of the latest technological developments for extending the life of the equipment and reducing maintenance requirements. The sorter itself is driven by contactless induction motors. Each cross-belt car unit contains a smart processor with its own independent set of controls enabling a large range of functional capabilities that can be configured on-the-fly. Sort and cross-belt action instructions, such as variable belt speeds and multiple dispatching positions are communicated across a contactless infrared link.

GBI provides automatic product loading by utilizing a series of metered induction belts to load the sorter from a stationary operator placement onto the moving cross-belt. Each cross-belt car is programmed to pull in the product from the metered belt onto the cross-belt car.

GBI incorporated the same logic and controls it has developed over many years of sortation experience to provide a proven, feature rich system. As with all GBI's sorters, GBI offers many options and additional ancillary components to provide each customer a fully integrated systems solution. Optional components include automatic loading, various display and notification methods, custom chute designs, customized software, and conveyors. GBI provides 24/7/365 service and support for all their systems.

See a demonstration of GBI's new Cross-belt and Tilt Tray Sorters at ProMat, Exhibit # 3531, January 12th — 15th, 2009, in Chicago or visit our website www.gbisorters.com.

A press conference is scheduled for 9:30 am, on Tuesday, January 13th, at ProMat 2009, in Exhibit 3531.

ABOUT GBI DATA & SORTING SYSTEMS

Founded in 1967, GBI is a systems engineering firm that became an employee owned business in 1994. GBI designs, manufactures and installs complete Turnkey Sortation Solutions for Order Fulfillment, Returns Processing, Loose Receipts, and Zip Code Sortation using Tilt Tray, Cross-Belt, Carrier, Hanging Garment, and Pick/Put-to-Light Sortation methods. GBI maintains a full staff of software, electrical, and mechanical engineers utilizing the latest languages and tools. GBI's custom software and systems configurations integrate seamlessly and interactively with existing Warehouse Management System.
